See useful user and network reports. Export user contact email addresses

MONETISATION OPTIONS
Control over charges for WiFi and any limits required on duration and bandwidth

EVENT MANAGEMENT
Tools to create multiple WiFi networks in a single venue with options to create network names for sponsorship opportunities

MARKETING TOOLS
Integrate with email marketing platforms, conference settings and CRM

WIFI PACKAGES
You can set access to free or paid and set limits on time and bandwidth

EVENT MANAGEMENT TOOL

With our conference manager tool, event organisers can offer secure and encrypted WIFi that is simple to administer. SSIDs can be personalised for specific events and can provide monetisation options. Multiple conferences and events can be catered for, each having their own private network allocated to their own rooms, halls and zones. The bandwidth can be set to accommodate the number of expected users ensuring a consistent quality of service for all attendees.
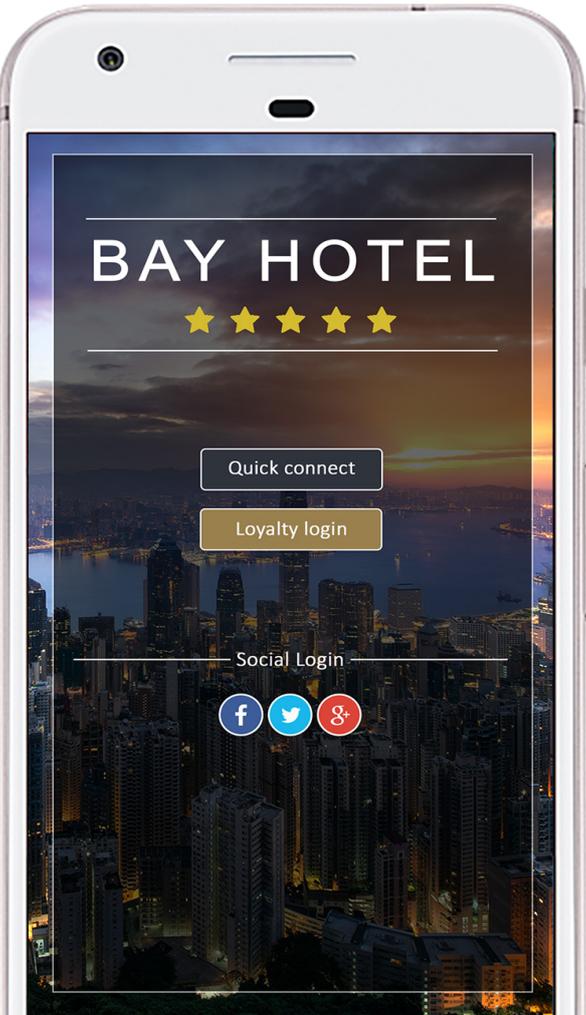

Login pages, custom SSIDs, and URL redirects can be created and allocated to each event, providing sponsorship opportunities where 3rd parties or event organisers can promote their brand and content.

With the event schedule tool, conferences and their specific requirements can be created in advance and set to automatically activate on the day of the conference.

After the event, organisers can see usage reports, monitor how the network performed, view location data, and export user contact details.

GUEST & VISITOR ENGAGEMENT

EMAIL & SMS
After a guest has authenticated onto the network, email and SMS messages can be sent directly to the guest welcoming them to the hotel, or scheduled to keep them updated about hotel services and promotions.

SURVEYS
Guests can be directed to satisfaction surveys that are created in the WiFi management dashboard. Easily monitor guest feedback and create alerts based on the results.

URL REDIRECTS
Redirect guests as they login to any webpage. This can include pages detailing hotel promotions and services, third-party adverting or sponsored pages, or to loyalty membership registration pages.

BRANDED PORTAL PAGES
The login pages that guest see when they connect to the WiFi provide an opportunity to showcase the hotel brand and display localised information about the individual hotels.

LOCATION TRACKING
Guests can be tracked around your venue and have targeted messages sent to them depending on their location
